

## Standards-based cylinders DSBC, to ISO 15552

**FESTO**

Festo core product range  
Covers 80% of your automation tasks

Worldwide:

Always in stock

Superb:

Festo quality at an attractive price

Easy:

Reduces procurement and storing complexity

★ Generally ready for shipping ex works in 24 hours  
Held in stock in 13 service centres worldwide  
More than 2200 product

★ Generally ready for shipping ex works in 5 days  
Assembled for you in 4 service centres worldwide  
Up to  $6 \times 10^{12}$  variants per product series

# Standards-based cylinders DSBC, to ISO 15552

Key features

FESTO

## At a glance

DIN

- Standards-based cylinders to ISO 15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA 24 562, NF E 49 003.1 and UNI 10290)

- Double-acting
- For contactless position sensing
- Available with protection against rotation
- EX4: for use in potentially explosive areas
- Extensive range of accessories makes it possible to install the cylinder virtually anywhere
- Three types of cushioning available:
  - P cushioning: elastic cushioning rings/pads at both ends
  - PPS cushioning: pneumatic cushioning, self-adjusting at both ends
  - PPV cushioning: pneumatic cushioning, adjustable at both ends
- The variants can be configured according to individual needs using a modular product system
- High flexibility thanks to the wide range of variants

## DSBC-...-C – With clamping unit, standard hole pattern

- Standard hole pattern
- Holding or clamping the piston rod in any position
- Piston rod can be held in position for long periods even with alternating loads, fluctuating operating pressure or leaks in the system

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with statutory minimum requirements, the product is not suitable for use in safety-related sections of control systems.

## DSBC-...-E1/-E2/-E3 – With end-position locking, standard hole pattern

- Standard hole pattern
- Positive locking in the end position as a drop guard. In the event of a pressure drop, the piston rod is locked in its end position
- Either at one or both ends

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with statutory minimum requirements, the product is not suitable for use in safety-related sections of control systems.

## DSBC-...-P2 – With bellows kit DADB, standard hole pattern

The bellows protects the piston rod, the seal and the bearing from the effects of a wide range of media, which has a positive impact on the service life of these components.

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection part 1.

The kit protects the piston rod, seal and bearings against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Fuel

## Ordering the bellows kit

An extended piston rod is absolutely essential if a bellows kit is to be used. The bellows kit can be ordered via the modular product system or as an accessory. The following must be noted in this case:

### Ordering via the modular product system:

The bellows kit is supplied mounted on the bearing cap using feature P2. The required piston rod extension is automatically taken into consideration. This means that there is no need to specify a value for feature ...E.

### Ordering as an accessory:

If the bellows kit is ordered as an accessory, the required value → page 53 must be entered for feature ...E in the modular product system.

# Standards-based cylinders DSBC, to ISO 15552

Key features

## DSBC-... D3 – Sensor slots on 3 sides

The piston position can be sensed on three sides of the drive if feature D3 is selected in the modular product system.

3 Slot for proximity sensor

## Position sensing/force control

With position sensor SMAT-8M, SMAT-8E, SDAT → page 60

Analogue position feedback possible

- Analogue output
  - 0 ... 10 V
  - 0 ... 20 mA

With proportional pressure regulator VPPM

Infinite adjustment of the gripping force possible

- Setpoint input
  - 0 ... 10 V
  - 4 ... 20 mA

## Optional accessories

Mounting kit DAVM → page 55

- For lateral valve assembly, directly on the drive
- Particularly suitable for decentralised use in large systems
- Mounting is only possible on the side on which the pneumatic connections are located

## Application examples

Automatic screw machine

For process control

## Standards-based cylinders DSBC, to ISO 15552

Key features

Variants from the modular product system		
Symbol	Key features	Description
	Q Square piston rod	Protection against rotation. For correctly oriented feeding
	C Clamping unit	Integrated clamping unit on the piston rod
	E1/E2/ E3 With end-position locking	Positive locking in the end position as a drop guard. If there is a drop in pressure, the piston rod is secured in its end position to prevent it from dropping
	L Low friction	<ul style="list-style-type: none"> <li>• Break-away pressure: high</li> <li>• Dynamic response: very fast</li> <li>• Resistance: minimal resistance during the movement, greatest stick-slip</li> </ul> Sample application: belt tensioner <ul style="list-style-type: none"> <li>• Suitable for applications that require a dynamic movement</li> <li>• Efficient at speeds above 50 mm/s</li> </ul>
	U Uniform, slow movement	<ul style="list-style-type: none"> <li>• Break-away pressure: low</li> <li>• Dynamic response: slow and constant</li> <li>• Resistance: strong resistance during the movement, minimal stick-slip</li> </ul> Sample application: slow feed motion <ul style="list-style-type: none"> <li>• Suitable for slow movements at a constant speed over the stroke range</li> </ul>
	L1 Low friction for balancer applications	<ul style="list-style-type: none"> <li>• Break-away pressure: low</li> <li>• Dynamic response: slow to fast, constant</li> <li>• Resistance: low, constant during movement</li> </ul> Sample application: mass balancing, no hysteresis, balancer <ul style="list-style-type: none"> <li>• The resistance is constant and low, regardless of the working pressure</li> <li>• Upward and downward movements as well as fast/slow movements always need an identical, low force</li> </ul>
	T Through piston rod	For working at both ends with the same force in the forward and return stroke, for attaching external stops
	F Female piston rod thread	–

## Standards-based cylinders DSBC, to ISO 15552

Key features

Variants from the modular product system		
Symbol	Key features	Description
	R3 High corrosion protection	All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion and acid-resistant steel
	T1 Heat-resistant seals	Temperature range 0 ... +120 °C
	T3 Low temperature	Temperature range -40 ... +80 °C
	T4 Heat-resistant seals	Temperature range 0 ... +150 °C
	A1 Scraper variant	Increased chemical resistance: For longer service life, e.g. when using cooling lubricants.
	A2 Scraper variant	Hard scraper: The cylinder is equipped with a hard-chrome plated piston rod and a hard scraper, which protects against dry, dusty and viscous media
	A3 Scraper variant	Unlubricated operation: Cleaning processes degrease the piston rod. A special piston rod seal designed for unlubricated operation permits a longer service life compared to the standard seal
	A6 Scraper variant	Metal scraper: The cylinder is fitted with a hard-chrome plated piston rod and a metal scraper, which scrapes off hard particles (e.g. welding spatter) adhering to the piston rod. For use in welding systems, for example
	...E Piston rod extension	–
	...L Piston rod thread extension	–

Note  
No transverse forces are permitted in combination with feature DSBC-...-L1.

## Permissible torsional backlash with variant Q – With protection against rotation

Piston $\varnothing$	32	40	50	63	80	100
Torsional backlash [°]	$\pm 0.65$	$\pm 0.6$	$\pm 0.45$	$\pm 0.45$	$\pm 0.45$	$\pm 0.45$

# Standards-based cylinders DSBC, to ISO 15552

Technical data

## Max. transverse force $F_q$ as a function of stroke length $l$ and lever arm $s$

Q – With protection against rotation

Ø 32

Max. torque = 800 Nmm/max. stroke = 300 mm

Ø 40

Max. torque = 1100 Nmm/max. stroke = 400 mm

Ø 50/63

Max. torque = 1500 Nmm/max. stroke = 500 mm

Ø 80/100

Max. torque = 3000 Nmm/max. stroke = 600 mm

### Examples for piston Ø 32 mm

Example 1:  
Stroke length  $l = 150$  mm  
Result: Permissible  
Transverse force  $F_q = 9.5$  N  
Lever arm  $s = 84$  mm

Example 2:  
Transverse force  $F_q = 40$  N  
Result: Permissible  
Stroke length  $l = 28$  mm  
Lever arm  $s = 20$  mm

Example 3:  
Stroke length  $l = 150$  mm  
Lever arm  $s = 100$  mm  
$$F_q = \frac{\text{Max. torque } 800 \text{ Nmm}}{\text{Lever arm } 100 \text{ mm}} = 8 \text{ N}$$
  
Result: Permissible  
 $F_q = 8 \text{ N} < F_{q\text{max.}} = 9.5 \text{ N}$

# Standards-based cylinders DSBC, to ISO 15552

Technical data

## Technical data DSBC-...-C – With clamping unit

- The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must not exceed the static holding force. The clamping unit is not backlash-free in the clamped condition if varying loads are applied to the piston rod.
- The clamping unit may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to sudden movement of the piston rod. Blocking off the air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Piston Ø		32	40	50	63	80	100	125
Clamping type with effective direction		At both ends						
		Clamping via spring force						
		Release through compressed air						
Static holding force	[N]	600	1000	1400	2000	5000	5000	7500
Max. axial play under load	[mm]	0.5	0.5	0.8	0.8	0.8	0.8	1.8
Min. release pressure	[bar]	3						

## Technical data DSBC-...-E1/-E2/-E3 – With end-position locking

- End-position locking should only be operated in conjunction with double-acting cylinders with exhaust air flow control in order to ensure that the lock is always completely released prior to starting the drive movement.
- The end-position locking may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to sudden movement of the piston rod. Blocking off the air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.
- Locking can be performed from any stroke position once the drive is brought mechanically into its end position.
- A very tightly set end-position cushioning (more than 50% closed) can result in the locking bolt not engaging reliably, resulting in premature wear.
- The exhaust hole must not be closed.

Piston Ø		32	40	50	63	80	100
Clamping type		Positive locking through stop cylinder					
		Release through compressed air					
Static holding force	[N]	500	500	2000	2000	5000	5000
Max. axial backlash with end position locked	[mm]	1.3	1.3	1.3	1.5	1.5	1.5
Min. unlocking pressure	[bar]	≤ 2.5		≤ 1.5			
Max. locking pressure	[bar]	≥ 0.5					

## Sizing example

When sizing pneumatic cylinders it is recommended as a basic principle that only 50% of the indicated theoretical forces (see above) be used.

### Given:

Mounting position = vertical  
 Workpiece load = 44 kg  
 $F = m \times g = 44 \text{ kg} \times 9.81 \text{ m/s}^2 = 431.6 \text{ N}$

### To be calculated:

Suitable piston Ø

### Example with 32 mm piston Ø:

Theoretical force at 6 bar, advancing = 483 N

50% of the theoretical force = 241.5 N

Static holding force with 32 mm piston Ø = 500 N

The static holding force of end-position locking is within the permissible range (max. 500 N) for a workpiece load of 44 kg (431.6 N), however the cylinder would be at 89% capacity.

### Result:

A cylinder with a piston Ø of 40 mm is therefore recommended for this application.

Piston rod thread type	Male thread								★	
	Female thread							4	★ F	
Profile type	Sensor slot on 1 side								★	
	Sensor slot on 3 sides								★ D3	
<b>M</b> Cushioning	Elastic cushioning rings/pads at both ends							5	-P	
	Pneumatic cushioning, self-adjusting at both ends							6	★ -PPS	
	Pneumatic cushioning, adjustable at both ends								★ -PPV	
<b>↓</b> Position sensing	Via proximity sensor								★ A	A

- 1 **Q** Not with L, U, L1, N3, T3, T4, P2, A1, A2, A3, A6  
Only up to a stroke of 1500 mm
- 2 **L, U** Not with T, R3, T1, T3, T4, P2, A1, A2, A3, A6, EX4
- 3 **L1** Not with T, PPV, R3, T1, T3, T4, P2, A1, A2, A3, A6, EX4
- 4 **F** Not with ...L
- 5 **P** Not with A1
- 6 **PPS** Not with T1, T3, T4, A1

 Note  
If feature L is used in combination with transverse loads or strokes of above 500 mm, suitable measures must be taken to support the piston rod.  
The operating pressure (→ page 13) is applicable for strokes up to 500 mm.

 Note  
If feature L1 is used in combination with strokes of above 500 mm, suitable measures must be taken to support the piston rod.  
The operating pressure (→ page 13) is applicable for strokes up to 500 mm.

	Bellows on bearing cap							-	9	P2	
Scraper variant	None								★		
	Increased chemical resistance									A1	
	Hard scraper									A2	
	For unlubricated operation									A3	
	Metal scraper									A6	
EU certification	None								★		
	[mm]	II 2GD						10	EX4		
Piston rod extension	None										
	[mm]	1 ... 500						11	★ ...E		
Piston rod thread extension	None										
	[mm]	1 ... 35		1 ... 70				11	-...L		

- 7 **R3** Not with A2, A6
- 8 **T1, T3, T4** Not with P2, A1, A2, A3, EX4
- 9 **P2** Not with N3, A1, A2, A3, A6, EX4  
Only for strokes of 10 ... 500 mm
- 10 **EX4** Not with T1, T3, T4, P2, A1, A3, A6
- 11 **...E, ...L** Only up to a stroke of 2000 mm

 - Note  
The piston rod extension for the bellows is automatically taken into consideration when feature P2 is selected. This means that there is no need to specify a value for feature ...E.

 - Note  
When selecting feature ...E in combination with feature P2, the part of the piston rod extension ...E is not covered by the bellows.

 - Note  
When feature P2 is selected in combination with feature T (through piston rod), the bellows is mounted on one side only.

- 1) Corrosion resistance class CRC 2 to Festo standard FN 940070  
Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.  
Corrosion resistance class CRC 4 to Festo standard FN 940070  
Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, for instance in the chemical or food industries. These applications may need to be supported by special tests (→ also FN 940082) using appropriate media.
- 2) Suitable for ATEX

- 1) Corrosion resistance class CRC 1 to Festo standard FN 940070  
 Low corrosion stress. For dry indoor applications or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).  
 Corrosion resistance class CRC 4 to Festo standard FN 940070  
 Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, for instance in the chemical or food industries. These applications may need to be supported by special tests (→ also FN 940082) using appropriate media.
- 2) Suitable for ATEX

Accessories

## Travel speed $v$ as a function of tubing length $l$

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the

connection part **1**.

The pressure generated in the bellows kit by the positioning motion is primarily defined by the travel speed

and tubing length. The recommended tubing length based on the travel speed of the drive can be read from the graph.

### Advancing

### Retracting

**Note**  
The push-in fittings in the adjacent table must be used for the pressure compensation hole. Silencers can be used as an alternative. This reduces the travel speed slightly.

Tube size and push-in fitting for pressure compensation hole

1) The dimension corresponds to the E value (piston rod extension) of the drive

# Standards-based cylinders DSBC, to ISO 15552

Accessories

## Ordering data – Bellows kit

An extended piston rod (order code E) is required when using a bellows kit

→ Ordering data – Modular products.

The necessary dimension for order code E as a function of piston diameter and cylinder stroke as well as the corresponding bellows kit is indicated in the table below:

### Order example:

Selected standards-based cylinder:

DSBC-32-320-PPV-A-...

The dimension for the corresponding E value (see table):

112 mm

Complete type code for standards-based cylinder:

DSBC-32-320-PPV-A-...-112E

The corresponding bellows kit:

DADB-V6-32-S301-350

Note  
The maximum overall stroke length must not be exceeded when combining cylinders and multi-position kits.

1) Suitable for ATEX

## Connecting two cylinders with identical piston Ø as a 3 or 4-position cylinder

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions.

This means that depending on actuation and stroke division, this type of cylinder can assume up to four

positions. In each case the cylinder is driven precisely against a stop. Note that when one end of the piston rod is

fixed, the cylinder barrel executes the movement. The line connections to the cylinder must be flexible.

### To achieve 3 positions

Two cylinders with identical stroke lengths must be connected together.

### To achieve 4 positions

Two cylinders with different stroke lengths must be connected together.

# Standards-based cylinders DSBC, to ISO 15552

Accessories

## Mounting kit DAVM

For lateral valve assembly, directly on the drive

Materials:  
 Mounting bracket, screws: Galvanised steel  
 Slot nut: High-alloy stainless steel

Example:

The hole pattern on the angle bracket enables solenoid valves to be attached on the right according to the assignment. The following table shows a few solenoid valves that are available.

1) Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. For dry indoor applications or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

## Position sensors

The position sensor continuously senses the position of the piston.

It has an analogue output with an output signal in proportion to the piston position.
